Skyline National Bank Partners with Eclipse to Design a New Central Office in Christiansburg, Virginia

January 6, 2021 | Christiansburg, Virginia – Skyline National Bank is excited to announce the design completion for a two-story, 7,000 square-foot central office at the intersection of Peppers Ferry Road and North Franklin Street in Christiansburg, VA.

"We are truly excited to announce a new, central branch of Skyline National Bank in Montgomery County. We are beyond proud of our bank's growth and the support coming from this community, especially during the recent need for PPP lending during the pandemic," says CEO Blake Edwards, Jr. "This facility represents a sincere commitment to consumers and business owners in the area and a significant investment in our community," continues Edwards.

The building's exterior design creates a unique, modern aesthetic that incorporates light-colored materials, including metal and brick, with "Hokie Stone," which is a unique grey limestone rock found in the New River Valley. Hokie Stone is a signature element used on the buildings throughout the campus of nearby Virginia Tech.

The interior design combines Skyline's branding, logo, and corporate colors, resulting in a vibrant space for customers and employees. Customers will be greeted by universal bankers and either served by way of two floating teller pods or inside three new account and loan offices. The lobby also includes a welcoming waiting area with a coffee bar. The second floor offers executive offices and a conference room.

After joining forces with two neighboring banks, Skyline National Bank was created in March of 2017 after independently serving the Blue Ridge Parkway community for over two hundred years. Currently, the bank has twenty-four locations.

Eclipse Brand Builders was selected to provide turnkey design-build services for the project, including architecture, engineering, interior design, and full-time on-site construction management. Eclipse will execute the project's construction using local sub-contractors and local suppliers for all labor and building materials through a competitive bid process, keeping construction dollars in the community.
